TransLution™ Software EazyScan

Tailored to how you work, not the other way round.

Use EazyScan to Save Money, Improve Accuracy & Reduce Loss

Everyone knows that using barcode scanning for recording stock movement in the warehouse or on the factory floor improves accuracy and reduces loss. However, until now, implementing a scanning system was time consuming, complicated and far too costly.

All that has changed. We can have your new TransLution EazyScan system up and running in as little as ONE DAY and at a cost well below what others offer. You can start with as few as one, two or three TransLution scanners and can add more as you grow. EazyScan will support as few or as many scanners as you need.

Pre-configured scanner prompts make EazyScan simple to use. Our installation professionals will provide scanners, barcode printers, software and supplies, and will have your system running efficiently in no time. TransLution EazyScan is tailored to how you work, not the other way around.

Enhanced SYSPRO Integration

With EazyScan you can select a number of SYSPRO transactions from our extensive list of supported functions. You can configure EazyScan to post specialized information captured on the scanner into SYSPRO:

- Lot Numbers
- Serial Numbers
- General Ledger Codes
- Additional References and Notations
- Any additional data fields supported by SYSPRO

TRANSLUTION EAZYSCAN ADVANCED FEATURES AND FUNCTIONALITY

Structured Barcodes

Barcodes can include a range of data that can reduce the number of scans required in your process.

For example, these barcodes include two different sets of data - [L] for Lot Number and [Q] for Quantity - that can be retrieved by the scanner (or identified visually by the user).

SYSPRO Transactions Supported

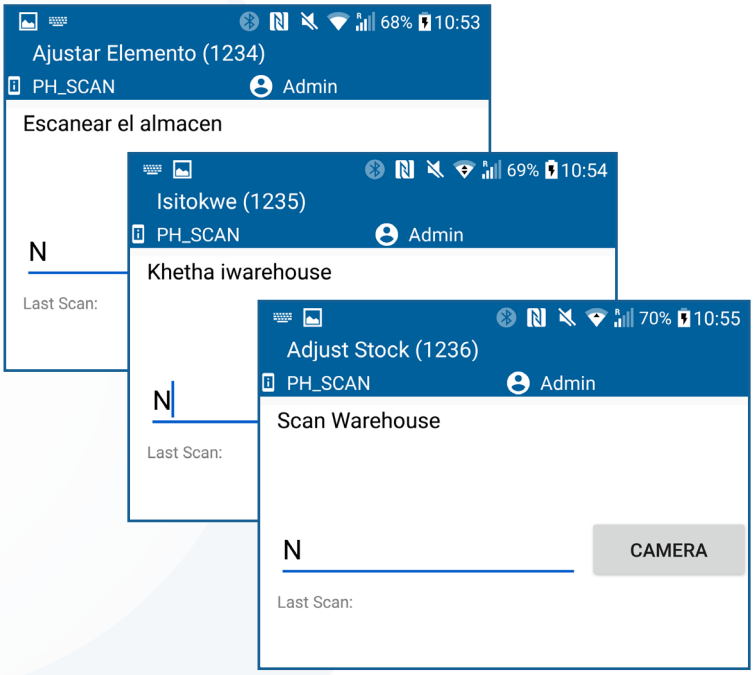

TransLution supports integration with all the primary SYSPRO business areas. We regularly post Inventory, WIP, Sales Order and Purchase Order transactions in a wide variety of implementations.

In addition to supporting an extensive range of business transactions, we are also flexible in how we support them. Do you use lot numbers or serialization, inspection or standard receiving, dispatch notes or invoices, specific GL codes or general codes? For any business process, we tailor the transaction setup in order to allow you to post the data you need in the way you need.

Multi-Language Support

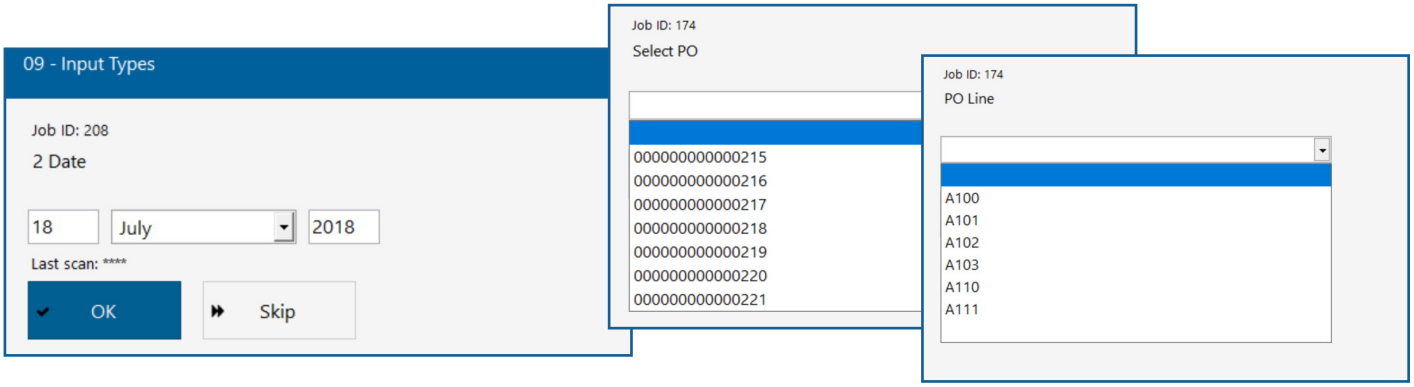

Each user is assigned a preferred language that is used when they log in.

- **The English user will see:** What warehouse are you in? – What item do you want to adjust? – How many items are you moving?
- **The Afrikaans user will see:** Kies pakhuis? – Watter item will jy verstel? – Hoeveel will jy verstel?
- **The Zulu user will see:** Ukweyiphi iwarehouse? - Yini ofuna ukuyilungisa? - Zingakhi izinto ozisusayo?

Power of Scanner Prompt Sequences

- You don't have to scan or enter data – we can provide you with a drop-down and date-and-time pickers.
  e.g Select Purchase Order – See only the Stock Codes that are on that order.
- Enter production date / batch expiry date.

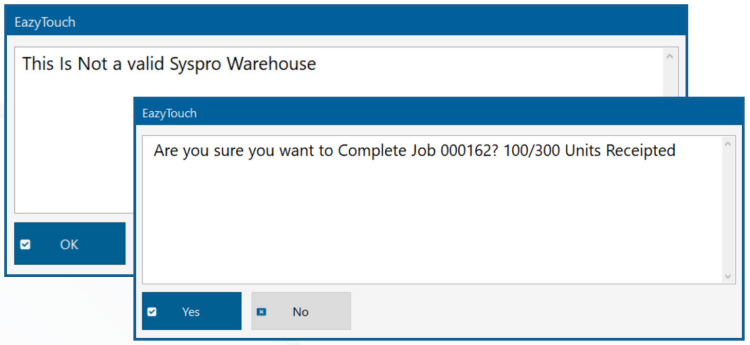

Power of Validation

Validate SYSPRO data:

- Is this a valid stock code for this warehouse?
- Is the quantity entered available to be moved?

Validate custom data:

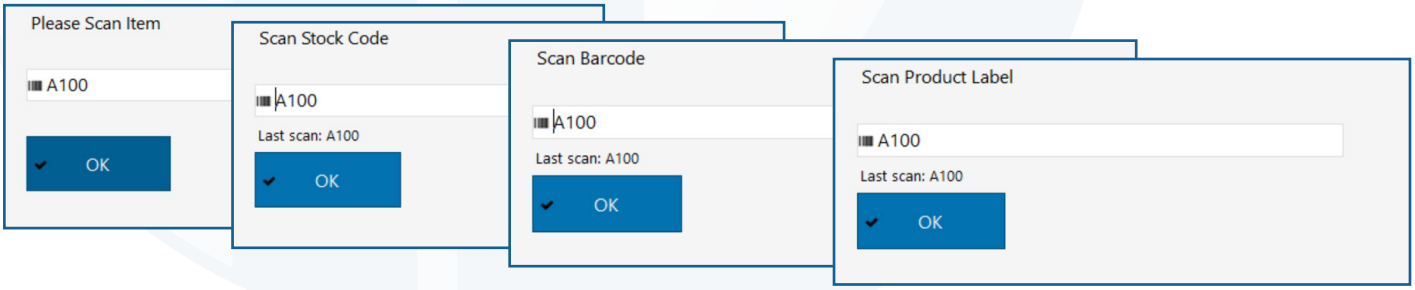

- Did we scan this lot number previously?
- Is this a valid serial number?
- What items are on this pallet?

Power of Configurability

The real strength of TransLution lies in the fact that even though so much is pre-configured for users, it is a simple task to change and reconfigure how the software looks and works. Some configurability examples are as follows:

- **Prompt text:** 'please scan item' can become 'scan stock code', 'scan barcode', 'scan product label'.
- **Scanning sequence:** you can scan or enter data in any sequence and design prompts to suit your workflow.
- **Fixed values:** if all transactions are performed in the same warehouse this value can be defaulted and never seen by the user.

TRANSLUTION ROADMAP

Integration

Leverage existing SYSPRO and inventory software investments: use TransLution to seamlessly integrate information captured on the production floor and in the warehouse with your existing system. TransLution supports multiple devices such as wireless barcode scanners, touch-screen PCs and tablet PCs, and delivers data captured directly into the accounting world of SYSPRO.

Data Analysis & Reporting

TransLution EazyQuery searches internal and external databases and presents information in customized views on-screen, with drill-down, print, and export to spreadsheet capabilities. EazyQuery further improves efficiency by automating processing, publishing and distributing query reports on a schedule for both internal and external users.

Shop Floor Integration

TransLution not only integrates seamlessly to your ERP and other business systems, we also offer many options to integrate to shop floor equipment including scales and various IoT devices. This allows you to combine shop floor process data with your inventory data.

TRANSLUTION CLIENTS

TransLution Android

TransLution Android uses hand-held scanners, phones or tablets to provide instant availability of process information, offering maximum control, increased information accuracy, traceability, reporting and improved decision making.

TransLution Windows

TransLution Windows runs on a standard PC or touchscreen where screens are configured to include only those operations relevant to each process, including buttons to print labels, view picking orders, stock count data, or reveal production instructions.

TRANSLUTION CUSTOMERS

TransLution Software is an **authorized SYSPRO System Integrator Development Partner** servicing over 350 companies, and supporting over 3600 mobile devices across multiple industry sectors:

- Food Processing & Manufacturing
- Automotive Components
- Textiles
- Steel Products Manufacturing
- Electrical Components
- Packaging
- Warehouse Management
